DURACHUTE™
**...Improve Safety and
Your Bottom Line**

CHUTES International™ earned its reputation and pioneered the industry with its patented heavy-duty steel debris chute. However, in the early 90's, there was a significant change in the construction industry: from new high rise buildings to renovation and light demolition. This change called for a lighter-weight debris chute and CHUTES International™ responded. Initially, we represented and tested plastic debris chutes as manufactured by other leading companies. Unlike any other debris chute company, we rent, install and service, as well as, sell chutes so we have first hand experience of YOUR obstacles and difficulties. After working with other systems, we acquired our own High Density Polyethylene (HDPE) debris chute system to better meet our and YOUR needs.

DURABLE
UNIVERSAL
RESILIENT
AFFORDABLE

ALL-INCLUSIVE

DURACHUTE™ can be used with other plastic chutes. Due to its larger size, it generally needs to be placed beneath the other sections (that's okay-it's made to be tough!). Also, DURACHUTE™ is the only system that offers a complete line

to meet your every need: outriggers for window/parapet, flat roof or scaffolding applications, multiple lifting devices (150' or 80' manual winch), heat-treated, proof tested adjustable length chains, protective liners for added durability and dust gaiters to minimize escaping dirt/dust.

COMPETITIVE

CHUTES International™ offers competitive pricing. DURACHUTE™ pays for itself in 2-3 uses. Also, it is longer lasting, making it even less expensive! Ask about our Stocking and Non-Stocking Dealer Programs for added savings and benefits!

All in-stock orders are shipping within one business day

DURACHUTE™ ... The Ultimate Plastic Chute System.

- ▲ Larger, 32" Inside Diameter
- ▲ Thicker, More Resilient HDPE
- ▲ Complete System For Your Every Need:
 - Window/Parapet Outrigger
 - Scaffold Outrigger
 - Flat Roof Outrigger
 - No Touch' Parapet Outrigger
 - Pitched Roof Outrigger
- ▲ Safe, Easy, And Quick To Install
- ▲ Pays For Itself In 2 To 3 Uses
- ▲ Extremely Flexible System
- ▲ Can Be Used For:
 - Roofing
 - Renovation
 - New Construction
 - Special Applications like Snow Removal & Landscaping
- ▲ Hardware Is Galvanized
- ▲ Sections Are Telescopic For Ease Of Storage And Transport
- ▲ Intermediate Intakes with Safety Flaps Can Be Easily Placed Anywhere Along Chute
- ▲ Chains are Adjustable to Meet Your Building Height Requirements
- ▲ Thicker High Impact Areas for Added Durability
