

RAIMONDI LIPPAGE SYSTEM

The clip and wedge lippage system used to satisfaction by thousands of professionals worldwide.

Ensures proper leveling of tile by eliminating lippage speeding the tile setting process. Recommended when installing large format, heavy, flexible or thin bodied tiles.

LIPPAGE SOLUTION

Various sizes and thicknesses of the R.L.S. clips are available from our standard $\frac{1}{16}$ " including $\frac{1}{32}$ ", $\frac{1}{8}$ " and $\frac{1}{16}$ " joint size.

Works with all of our clips offered and are reusable. The wedge is placed after the tiles and clips have been set.

Adjust the tension and remove the lippage using the floor or wall pliers.

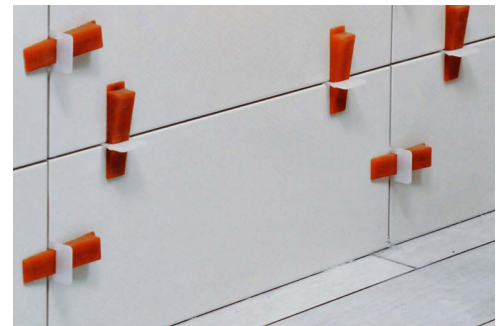

LIPPAGE

After the clips and tile have been set place the wedge in the clip and start tensioning it with the pliers.

LEVEL

Once the pliers are adjusted and the wedge is tensioned the lippage will start to level out.

VERTICAL

The R.L.S. system can be used vertically on walls, backsplashes, or any vertical configuration using the "wall" pliers (LSPLIERW).

**LS200CLIPL

Wedges used with the clips can be reused.

LSPLIERF

Ergonomic tension adjustable plier for floor installation.

LSPLIERW

Ergonomic tension adjustable plier for wall installation.

LS100KIT

Bucket supplied with 100 regular clips, 100 wedges and a pair of floor pliers.

CLIP

After spreading the adhesive insert the clip base under the tile along the four sides. Set the tile and beat it with a rubber mallet to remove any air pockets.

WEDGE

Insert the wedge into the clip slot.

TENSION

Use the pliers to tension the wedge and remove lippage. Do not pass the breaking point.

REMOVE

Once the adhesive is set the protruding part of the clip must be removed. Using a rubber mallet or your foot hit or kick the clip parallel to the joint.
