

R.L.S. VITE

VITE [vee-t-er] is a Cap-and-clip lippage system without the use of any tools. Ergonomic and intuitive design to the cap make it easy to screw the lippage system onto its clip.

Just as the Raimondi Lippage System, the VITE has a clip that is placed under the tile into the adhesive. The cap is screwed onto the clip and once the adhesive has set the VITE is removed by kicking or using a rubber mallet to knock it off.

LIPPAGE SOLUTION

Joint sizes of $\frac{1}{32}$ " for both clips, for tile $\frac{1}{8}$ " to $\frac{5}{8}$ " or $\frac{5}{8}$ " to 1" thick depending on the clip being used. See the next page for corresponding part numbers.

The caps for the VITE system can be collected and reused after usage, just as the wedges from the R.L.S. or our Double spacers. The cap fits on both clips.

VITE [vee-t-er] is the Italian word for the action 'screw' to turn the screw on. This being the main attribute to the R.L.S VITE.

SCREW (VITE)

After the clips and tile have been set screw the cap on from the top. Screw down until the lippage has been resolved and the tiles align.

DESIGN

The new and ergonomically designed VITE has holes in the cap so that the joints can be seen when cap is present. The VITE can also be used at cross-section on tile layouts.

RE-USE

Just like the Raimondi Lippage System the VITE can be kicked or knocked-off (using a rubber mallet). After removal the cap can be re-used.
